Лабораторная работа #1. Метод итераций

Выполнил: Боровский Илья Вариант: 6

$$x^3 - 1.5x^2 + 0.58x - 0.057 = 0$$

f (generic function with 1 method)

```
• f(x) = x^3 - 1.5 * x^2 + 0.58 * x - 0.057
```

```
plot(
     -1:.1:2,
     f.(-1:.1:2);
     label=:none
. )
```

Возьмём отрезок [-1,2] в качестве [a,b].

Приведём $x^3 - 1.5x^2 + 0.58x - 0.057 = 0$ к канонической форме, выразив x.

$$-x^3 + 1.5x^2 + 0.057 = 0.58x$$
 $\frac{-x^3 + 1.5x^2 + 0.057}{0.58} = x$

имеем

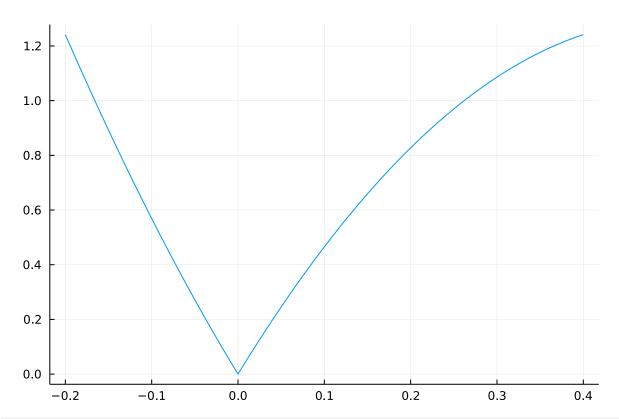

$$arphi(x) = rac{-x^3 + 1.5x^2 + 0.057}{0.58}$$
 $arphi'(x) = rac{-3*x^2 + 3x}{0.58}$

φ (generic function with 1 method)

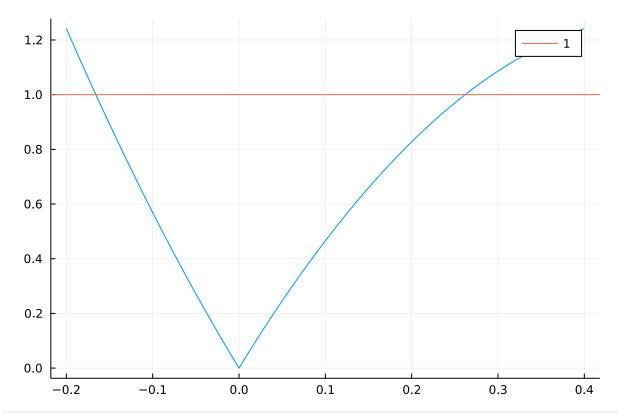

$$\phi(x) = (-x^3 + 1.5x^2 + 0.057) / 0.58$$

dφ (generic function with 1 method)

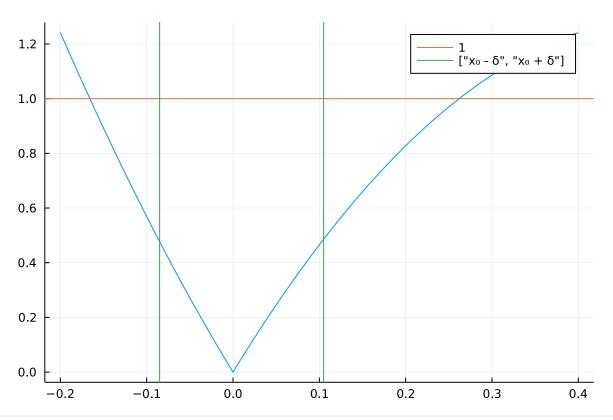

$$-d\phi(x) = (-3x^2 + 3x) / 0.58$$

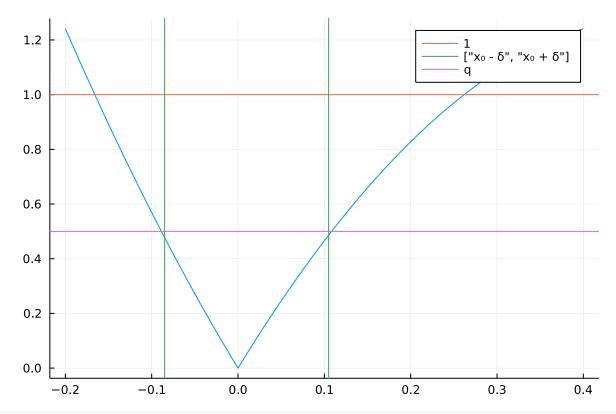

```
plot(
     -.2:.01:.4,
     abs.(dφ.(-.2:.01:.4));
     label=:none
)
```

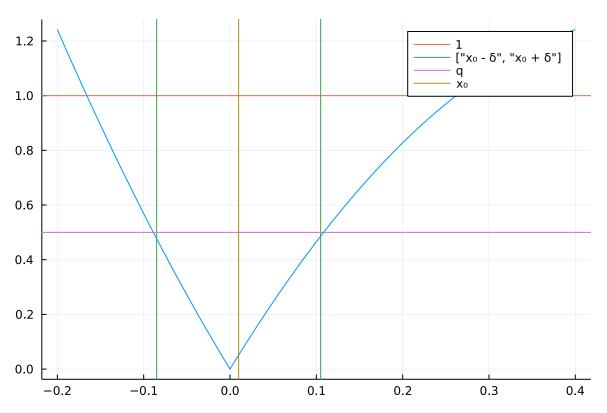

hline!([1]; label="1")

• vline!([-.085, .105]; label=[" $x_0 - \delta$ ", " $x_0 + \delta$ "])

hline!([.5]; label="q")

vline!([.01]; label="x₀")

В качестве $|x-x_0| \leq \delta$ отрезок [-0.065, 0.081], тогда $x_0=0.01, \delta=0.095, q=0.5$.

Вычислим *т*а:

f(x[end])

$$m \leq \delta*(1-q)$$
 $m \leq 0.095*(1-0.5) = 0.0475$

Вычисление корня

```
\mathbf{x} = [0.01]
 \cdot x = \lceil .01 \rceil
